Foreword

This eco-labelling criteria document is developed by SIRIM Berhad to support implementation of labelling for environmentally preferred products or services in Malaysia. The need for environmental labelling for products and services has been identified by the Malaysian industries to respond to requests from both domestic and foreign purchasers. Globally established concepts for labelling have been taken into consideration in developing the criteria, whilst evaluation methodologies selected are based on life cycle assessment and consideration with reference to international or other recognised standards.

This eco-labelling criteria document is developed through consultation with the industry players and other stakeholders and endorsed for adoption by a committee established by SIRIM Berhad. This document is subject to review to reflect changing needs and conditions. Users and other interested parties may submit comment on the content of this document for incorporation into future revisions.

This eco-labelling criteria document is a merger of SIRIM ECO 032, *Eco-labelling criteria for coated flat steel products* and SIRIM ECO 064, *Eco-labelling criteria for long steel products*. This document cancels and replaces SIRIM ECO 032:2011, *Eco-labelling criteria for coated flat steel products* and SIRIM ECO 064:2017, *Eco-labelling criteria for long steel products*.

The use of eco-labelling criteria document is not mandatory unless otherwise required by regulatory authorities.

Eco-labelling certification scheme offers certification for a range of products and services in conformance with the criteria document. For further information on the eco-labelling certification scheme, contact:
