SIRIM CFP 024:2024

Foreword

This product category rules document was developed by a committee established by SIRIM Berhad, in consultation with industry players and other stakeholders. This document was developed to support the implementation of SIRIM Carbon Footprint (CFP) Labelling Scheme which is a form of Type III environmental declaration scheme.

The intended output of SIRIM CFP labelling scheme is primarily for use in business-to-business communication, although the same output can be adapted for business-to-consumer communication. The quantified CFP will enable the consumers to make an informed choice based on CFP value(s) according to product categories or products having similar functions.

Users and other interested parties may submit comment on the content of this document for incorporation into future revisions.

SIRIM Carbon Footprint (CFP) Labelling Scheme offers certification for a range of products and services in conformance with the product category rules documents. For further information on this certification scheme, contact:
